

FITCHBURG FILTRATION OF RIVER WATER - FITCHBURG, MA

PROJECT INFO:

OWNER:

City of Fitchburg, MA

ENGINEER:

Earth Tech

PROJECT VALUE:

\$12.5 Million

TECHNOLOGIES/MATERIALS:

Water Treatment - Direct Filtration of River Water

PROJECT HIGHLIGHTS:

A gravity flow system built into the sloping site reduces the need for secondary pumping

ADDITIONAL DETAILS

Methuen Construction was the General Contractor for the construction of a water treatment facility that allows direct filtration of river water for the Fitchburg regional water district. Methuen Construction self-performed most of the work including: site work, excavation, concrete, yard piping, process piping, civil, lagoons, buildings, equipment installation, and coordination of plant start-up. The filtration facility is built into a sloping site, which allows the use of a gravity flow system that reduces the need for secondary pumping. Treated water is discharged into a two-zone, 2-million gallon storage tank, and then into an adjoining 36-inch diameter water transmission main that serves the regional water district.
