

PRINCETON 1.5 MW WIND TURBINE INSTALL - PRINCETON, MA

PROJECT INFO:

OWNER:

Princeton Municipal Light Department

ENGINEER:

STV Enigneers

PROJECT VALUE:

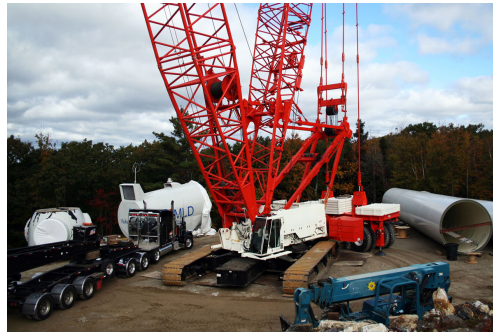

\$1.3 Million

TECHNOLOGIES/MATERIALS:

1.5 MW Wind Turbines

PROJECT HIGHLIGHTS:

A complete rebuild of the existing road through a densely wooded area was required in order to transport the turbines.

ADDITIONAL DETAILS

Methuen Construction prepared the site and installed two new 1.5MW Fuhrlander 1500 wind turbines for the Princeton Municipal Light Department.

Each turbine is mounted on a 230-foot tower and their combined output delivers a significant amount of the town's energy needs. Additionally, ratepayers realized further cost savings by selling renewable energy credits on the open market.

The site work was challenging as a complete rebuild of the existing road through a densely wooded area was required in order to transport the turbines to their final mountaintop destination.
